HAIMER WinTool

Tool & Data Management

www.haimer.com

HAIMER WinTool can give you the edge that will allow you to sustain a long-term competitive advantage for your company.

1 Efficient tool management

WinTool is the fastest way to create a central tool and data library for your company. This is essential for planners, programmers, purchasers and machine operators to work together efficiently and safely, enhancing overall performance.

2 True-to-original tool models

WinTool has developed the leading complete tool generator. Easily assemble a new tool with multiple components, name it, and generate a dimensioned graphic and an exact 3D model. Everything is interactive and CAM-ready!

3 CAM integration

WinTool's core competence for 20 years. Exact 3D tools with cutting values are found directly in the CAM interface and imported into the native environment. Set-up lists are automatically created in WinTool for the operation and all files are archived and released in a controlled manner.

4 Minimal set-up times

Tool standardization and order-related set-up must be properly organized. WinTool manages the complete tool circulation and calculates (net) setup lists for machines, including availability checks.

5 Improved traceability

WinTool manages all associated production data in the network for each CNC operation. Program versions, instructions, set-up lists and CAM files are simply stored and remain traceable, confusion-proof and traceable.

6 Optimal inventory control and optimization

Do you want to know if a cutting insert is available and how it has been used so far? WinTool provides complete transparency, as all your CNC data – from the program to the cutting insert – is stored in a relational database and can be analyzed.

7 Lean working capital warehouse

WinTool reliably manages equipment requirements and supplies. Exact stocks and where-used lists are monitored simply and semi-automatically and items are provided in the right quantity, at the right place and at the right time. In this way, WinTool helps to reduce tool diversity.

8 Independent & integrative

WinTool is the only solution provider for tool management and cooperates with all manufacturers of tools, measuring devices, CAM systems, etc. This gives you independence and flexibility with your suppliers.

9 Digital workplace

WinTool enables the individual output of setup lists and setup sheets, as well as user-defined reports on tool usage, availability and maintenance to make informed decisions and identify trends. This information is available to you digitally at the machine or via tablet/smartphone.

10 Perfect networking with HAIMER i4.0

In future, your tools can be tracked even better in the tool presetting process and historical values from shrinking, balancing and presetting can be called up. With the combination of WinTool and HAIMER TRM (Tool Room Manager), you can digitize and optimize the entire presetting area.
